

SG-EVO4-ELV Elevator Controller

Modular

Add as many controllers as required.

Commercial Application

Up to 20,000 users and unlimited codes.

Flexible

Connect to software using USB or with port-forwarding online.

Customizable

Limit each customer to a specific floor, or multiple floors.

Our elevator controller works the same way as our other controller, but has the ability to limit what floor each customer has access to. It works with all Stor-Guard Keypads, Stor-Guard Bluetooth device and AccessPlus software.

The controller communicates with both the keypads and the software. In the event that the controller loses communication with the software, it stores, and will use the stored info, until communication is reestablished.

Our access control consists of three required components. These are software, controller, and keypad.

Features:

- Controls one elevator
- Modular Design - Simply add as many controllers as required
- Controls what floor opens for each customer
- Compatible with all Stor-Guard keypads
- 20,000 User Capacity Per Controller
- Unlimited Site Codes
- Program and Manage with AccessPlus Software
- Flexible Communication Options (USB and TCP/IP adapter available)
- Uses standard power outlet

Specifications:

Electrical Box Size	12 x 12 x 4"
Input Voltage	12VDC
Input Current	110mA
Operating Temp.	32°F to 150°F
